Benefit Rates

Statewide Average Weekly Wage (SAWW)

Every six months, the Illinois Department of Employment Security publishes the statewide average weekly wage (SAWW). The SAWW sets the maximum and minimum weekly benefit levels for workers' compensation. To calculate the SAWW, total wages are divided by the total number of employees in the past six months. Some employees worked every day, and some worked only a few days, but all are counted together. (Federal workers and self-employed workers are excluded.) According to Section 8(b)6, the IWCC is to post the rates by January 15 and July 15 of each year.

Although every attempt is made to calculate the workers' compensation rates in an accurate and reliable manner, only the Illinois statute governs. Where there is a disagreement between the statute and the IWCC's calculations, the statute is correct.

As provided in Section 8(b)4, there was no increase in the maximum benefit rates for 1/15/10 - 7/14/10 because the FY SAWW decreased.

As provided in Section 8(b)4, there was no increase in the maximum benefit rates for 1/15/11 - 7/14/11 because there was no increase in the SAWW since 7/15/09 - 1/14/10.
